Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Customer Persona: Loan Applicant visiting Smart Lender web application

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Hears about Smart Lender from a bank officer or online search - Visits the Smart Lender web application home page - Reads the home page information about the ML-powered prediction system	- Fills in personal details — gender, marital status, dependents, education - Enters financial details — applicant income, co-applicant income, loan amount - Selects credit history, loan term, property area and submits the form	- Views the prediction result — Approved or Rejected - Reads the applicant summary table on the result page - Decides to reapply, visit the bank, or accept the decision
Touchpoint <i>What part of the service do they interact with?</i>	- Smart Lender home page (index.html) with hero section and model stats - Hero stats banner showing 94.7% training accuracy and 81.1% testing accuracy “How It Works” section explaining the 3-step process	- Loan application form with dropdown menus and input fields - Form validation ensuring all 11 fields are filled before submission - Submit button triggering the Flask /predict route	- Result page (result.html) showing Approved or Rejected badge - Applicant summary table showing all entered details “Apply Again” button to return to the home page form
Customer Thought <i>What is the customer thinking?</i>	“This looks reliable — it uses XGBoost with 81% accuracy, let me try it”	“I hope my income and credit history are good enough for approval” “I am not sure what loan amount I should	“Great, I got approved — I can now proceed with my loan application at the bank” “I was rejected — I need to check my credit

Phase of Journey	Stage 1	Stage 2	Stage 3
	• “I wonder what factors affect my loan eligibility the most” • “Will this system give me an honest and accurate prediction?”	- enter — should it match my repayment capacity?” • “Will my self-employment status negatively affect my chances?”	- history and improve it before reapplying” • “The system showed me the key decision factors — now I know what to work on”
Customer Feeling <i>What is the customer feeling?</i>	• Curious and hopeful about getting an instant eligibility prediction • Excited by the simple and modern interface of the web app • Trusting the AI-powered system due to the accuracy stats displayed	• Nervous and uncertain while entering financial details • Careful while filling in the form — wants to enter accurate data • Anxious about pressing submit — worried about the outcome	• Relieved and happy if approved — confident to approach the bank • Disappointed but informed if rejected — understands the key factors • Empowered with data-backed decision and clear next steps
Process Ownership <i>Who is in the lead on this?</i>	Gollapalli Nimruja — Flask developer responsible for home page UI	Gollapalli Nimruja — Form design and /predict route in app.py	Gollapalli Nimruja — Result page rendering and applicant summary logic
Opportunities <i>How can we improve this stage?</i>	• Add a loan eligibility calculator or EMI estimator on the home page to attract more users • Add multi-language support so applicants from rural areas can use the app in their language • Add a chatbot or FAQ section explaining what credit history means and how to improve it	• Add real-time field validation with helpful tooltips explaining each input field • Add an auto-fill feature based on previous applications to save time for repeat users • Allow applicants to upload income documents for more accurate prediction in future versions	• Show a confidence score or probability percentage alongside Approved/Rejected result • Send prediction result to applicant's email or allow PDF download of the result • Add a recommendation section suggesting steps to improve profile for rejected applicants
